Core Competencies

SyberWorks provides the most cost-effective and highly configurable Learning Management System for delivering and tracking all forms of training, policies and procedures, and related facilities and equipment. The software is available on a licensed or hosted basis (SaaS).

Key Features

- Course catalog/self-registration
- Web-based and instructor-led training
- Competency management
- Integrated document management
- Surveys
- Testing
- Automation of SOP updates
- Read and Sign
- Extensive automated reminder messaging

- Over 70 standard reports
- Custom reporting and delivery
- Discussion Groups
- 21 CFR Part 11 Compliant
- Supports SCORM/AICC

Key Services

- LMS Setup and Configuration
- Single sign-on
- Interfaces to other systems
- Feature modifications
- Software customization
- Course development

Key Differentiators

SyberWorks uses a consultative approach to fully understand your requirements and then exceed your expectations.

We only sell a completely configured LMS installation rather than just a software tool. Rather than just an erector set, we provide you with a working Ferris wheel.

We take the time to understand your organization structure and how best to assign training requirements. Factors to consider include reporting requirements and span of control.

We also develop an understanding of your training curricula and how they relate to factors such as functional position, management role, and physical location. The assignment of training can be completely automated from the assignment of job roles. Then, if a person's role changes, the training requirements are adjusted automatically.

Finally, our customer service and training are personalized to you own specific system implementation.

The bottom line: reduced risk, reduced cost, speedier implementation, greater satisfaction
